

Assignment Title: - No. 2

Design a Personal Portfolio Page using HTML and CSS.
Use bootstrap CDN if required.

Name: - Piyush Rajendra Waghmare

PRN: - 123B1B284

DIV: - D4

Objectives: -

- To design a personal portfolio website using HTML and CSS.
- To understand the use of semantic HTML sections for structured web pages.
- To implement responsive design using CSS media queries.
- To enhance user experience using JavaScript-based interactivity and animations.
- To showcase personal information, skills, projects, research, and certifications in a professional manner.

Outcomes: -

- Successfully designed a fully responsive personal portfolio webpage.

- Gained hands-on experience with modern CSS layouts such as Flexbox and Grid.
- Learned how to integrate external JavaScript libraries like Typed.js and GSAP.
- Improved understanding of DOM manipulation and event handling.
- Developed a real-world portfolio suitable for academic and professional use.

Theory Concept in brief: -

A personal portfolio website is a digital platform used to present an individual's profile, skills, projects, achievements, and contact information.

HTML is used to structure the content into meaningful sections such as Home, About, Skills, Projects, Research, Certifications, and Contact.

CSS is used for styling, layout management, responsiveness, and visual effects.

JavaScript enhances interactivity by implementing animations, navigation toggling, form validation, and dynamic text effects.

Modern web development practices emphasize responsiveness, accessibility, and user engagement, all of which are incorporated in this project.

Technologies Used:

- **HTML5** – Page structure and semantic layout
- **CSS3** – Styling, animations, Flexbox, Grid, media queries
- **JavaScript (ES6)** – Interactivity and DOM manipulation
- **Typed.js** – Animated typing effect for professional roles
- **GSAP (GreenSock Animation Platform)** – Scroll-based animations
- **CDN Libraries** – External script loading for performance

Dataset Used: -

- No external dataset was used.
- All content such as personal details, skills, project descriptions, and certifications were manually entered.

- Icons and images are used only for visual representation.

Functional Description:

- **Navigation Bar:** Fixed responsive navigation with hamburger menu for mobile devices.
- **Home Section:** Introduction with animated profession text and downloadable CV.
- **About Section:** Displays personal details in a structured format.
- **Skills Section:** Categorized technical skills displayed using cards and tags.
- **Projects Section:** Highlights major academic and personal projects with descriptions.
- **Research & IP Section:** Displays research work and intellectual property details.
- **Certifications Section:** Lists verified certifications with issuer details.
- **Contact Section:** Includes social media links and a validated contact form.

Program Code with output Screenshot: -

File Name : - index.html

Conclusion: -

This assignment successfully demonstrates the creation of a modern, responsive, and interactive personal portfolio website using HTML, CSS, and JavaScript.

The project follows best practices in web design by using semantic elements, responsive layouts, and user-friendly animations.

The portfolio serves as a comprehensive digital profile and can be extended further for professional deployment.
